Subject: The NEWS Editorial on R-32 Refrigerant

As A2L refrigerants become more common in North America, HVAC dealers and homeowners should be provided facts and educated against myths and misconceptions regarding potential refrigerant replacements for R-410A. This is especially important as it appears likely that not all HVAC manufacturers will be using the same next-generation refrigerant.

Goodman® brand has publicly announced that it is developing key products for North America that utilize R-32—a refrigerant that is currently used in over 100 million units across the world.

A recent editorial published in ACHR's *The NEWS* can be viewed at link below.
